ECOFLOR 2027

Book of Abstracts

24th Annual Meeting of the Floral Ecology and Evolution Working Group

3–6 February 2027 · Faculty of Science, Charles University · Prague

October 13, 2026

Table of contents

Welcome **3**

Oral presentations **4**

Pollen and pollen transfer 4

Pollen limitation in *Primula veris* along an elevation gradient 4

Pollen foraging by facultatively social *Ceratina* bees 4

Monitoring and restoration 5

AI cameras reveal night-time flower visitors 5

Posters **6**

Poster session 6

Floral scent variation in Mediterranean *Ophrys* 6

Urban gardens as pollinator refugia 6

Keyword index **7**

Author index **7**

Welcome

Welcome to ECOFLOR 2027 in Prague! This book contains the abstracts of all oral and poster presentations, ordered as in the programme. Presenting authors are underlined.

The meeting is organised by researchers at the Faculty of Science, Charles University in cooperation with the Česká společnost pro ekologii (ČSPE) and the Asociación Española de Ecología Terrestre (AEET).

3 oral presentations · 2 posters

Oral presentations

Pollen and pollen transfer

Pollen limitation in *Primula veris* along an elevation gradient

Rising Stars talk · EF27-001

Jana Nováková[1,2], John Smith[2], Ana García[3]

[1] Department of Botany, Faculty of Science, Charles University, Prague, Czech Republic
[2] Institute of Botany, Czech Academy of Sciences, Průhonice, Czech Republic
[3] Estación Biológica de Doñana (EBD-CSIC), Sevilla, Spain

Pollinators move pollen between flowers, but how much of it reaches conspecific stigmas remains poorly quantified. We followed individual visits and counted grains deposited after single visits. Seed set increased by 35% ($p < 0.01$) when flowers received supplemental pollen; costs were ~$2 per plot.

In a second experiment, we contact @EcoFlor and show that *Bombus terrestris* dominated visits.

Keywords: Breeding systems & reproductive success, Global change (climate, land use, pollution), Mountain & alpine ecosystems

---

Pollen foraging by facultatively social *Ceratina* bees

Talk · EF27-002

Petr Švanda[1], Jakub Štenc[1,2]

[1] Department of Zoology, Faculty of Science, Charles University, Prague, Czech Republic
[2] Department of Botany, Faculty of Science, Charles University, Prague, Czech Republic

Pollinators move pollen between flowers, but how much of it reaches conspecific stigmas remains poorly quantified. We followed individual visits and counted grains deposited after single visits.

Keywords: Pollen transfer & pollination efficiency, Pollinator behaviour & foraging, Floral signals & rewards (scent, colour, nectar)

Monitoring and restoration

AI cameras reveal night-time flower visitors

Talk · EF27-003

Filip Bužleta[1], Maria O'Neil[2]

[1] Faculty of Science, University of South Bohemia, České Budějovice, Czech Republic
[2] University of Galway, Ireland

Pollinators move pollen between flowers, but how much of it reaches conspecific stigmas remains poorly quantified. We followed individual visits and counted grains deposited after single visits.

Keywords: Monitoring, citizen science & new methods (AI, imaging), Communities & plant–pollinator networks, Conservation, restoration & rewilding

---

Posters

Poster session

Floral scent variation in Mediterranean *Ophrys*

Poster 1 · EF27-004

Ana García[1]

[1] Estación Biológica de Doñana (EBD-CSIC), Sevilla, Spain

Pollinators move pollen between flowers, but how much of it reaches conspecific stigmas remains poorly quantified. We followed individual visits and counted grains deposited after single visits.

Keywords: Floral signals & rewards (scent, colour, nectar), Floral evolution & speciation, Orchid deception

---

Urban gardens as pollinator refugia

Poster 2 · EF27-005

Tom Weber[1], Lea Klein[1]

[1] University of Würzburg, Germany

Pollinators move pollen between flowers, but how much of it reaches conspecific stigmas remains poorly quantified. We followed individual visits and counted grains deposited after single visits.

Keywords: Urban ecology, Conservation, restoration & rewilding, Communities & plant–pollinator networks

---
